

Abstract

[00122]

The present invention facilitates the enrollment of a user with multiple request for quote (RFQ) providers. An RFQ provider facilitates the quote/bid process between a user (e.g., a merchant or seller) and a supplier (e.g., a merchant or seller). A quote may include a bid on a product or service that the user has an interest in. A user may submit data related to user information, an RFQ, and/or the like to a request for quote enrollment (RFQE) system. Upon submitting the data to the RFQE system, the user is registered in the RFQE system. The RFQE system uses an integrated system of information to enroll the user with multiple RFQ providers. Thus, the RFQE system expands the distribution opportunities for the user and saves the user time by enrolling the user with multiple RFQ providers.
